

```
#include <fstream>
#include <string>
#include <sstream>
#include <vector>
#include "Utility.h"

std::vector<std::string> Utility::Split(
    std::string& line, char delimiter)
{
    std::istringstream stream(line);
    std::string field;
    std::vector<std::string> result;

    while (getline(stream, field, delimiter)) {
        result.push_back(field);
    }

    return result;
}
```
